CALDERA

12/16 Three Australians on holiday were taken by surprise,  
LIGHT as well as GNS's lead volcanologists, as Mt. Ruapehu unexpectedly erupted last night. The three climbers were about halfway up the summit of Ruapehu before they began to feel the first tremors.

"At first we didn't think much of it," Brent Jacobs said. "We checked with the DOC Ranger before heading out in the morning and everything looked great. The weather was perfect. No signs of activity on Ruapehu"

Jacobs and his group continued up the mountain for another 20 minutes before realizing what was actually happening. "We looked up and suddenly there were massive vents of smoke rising from the top, and heaps of massive molten rocks flying toward us. The ground was shaking so bad we could barely stand. We took off as fast as we could down the mountain, and probably made it down in about a quarter of the time it took to go up."

The GNS was just as surprised by the eruption. "Nature is unpredictable," Brian Carter exclaimed. "We have teams out there constantly monitoring the volcanoes, looking for signs of activity. This one just completely took us by surprise. Luckily not many
